## AI-BLOCKCHAIN

A powerful tool for smart solutions

AINOMO.COM

# ABOUT COMPANY

## **One platform. Maximum capabilities.**

We present for our partners innovative solutions for successful crypto-asset management.

Ainomo's efficiency is based on directives built on artificial intelligence principles, providing unrivaled accuracy and reliability in decision making.

# AINOMO

## main areas of development

### BLOCKCHAIN

Ainomo's blockchain technology opens new horizons for the development of the digital economy by providing a reliable and efficient infrastructure for financial transactions, identification, agreements and applications.

### SECURITY

256-BIT CRYPTOGRAPHIC ENCRYPTION

### ARTIFICIAL INTELLIGENCE

We build systems capable of analyzing massive amounts of data, identifying patterns and making accurate predictions, with applications in industries ranging from finance to healthcare.

### DERIVATIVES

Using a variety of derivatives, traders and investors can implement a variety of trading strategies, including hedging, investing, trading and arbitrage.

# AINOMO

is proud of its achievements

**55%**

**LEADERSHIP IN THE INTEGRATION OF BLOCKCHAIN TECHNOLOGIES**

We build systems capable of analyzing massive amounts of data, identifying patterns and making accurate predictions, with applications in industries ranging from finance to healthcare.

**20%**

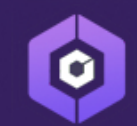

**A BREAKTHROUGH IN THE DEVELOPMENT OF ARTIFICIAL INTELLIGENCE**

**25%**

**INNOVATION IN LENDING**

Ainomo has revolutionized the lending industry by introducing smart contract-based solutions that make the process faster, safer and more accessible to users around the world.

**ADVANCED ARTIFICIAL INTELLIGENCE TECHNOLOGIES**

# POTENTIAL BLOCKCHAIN

## TRANSACTIONAL DATA ANALYSIS

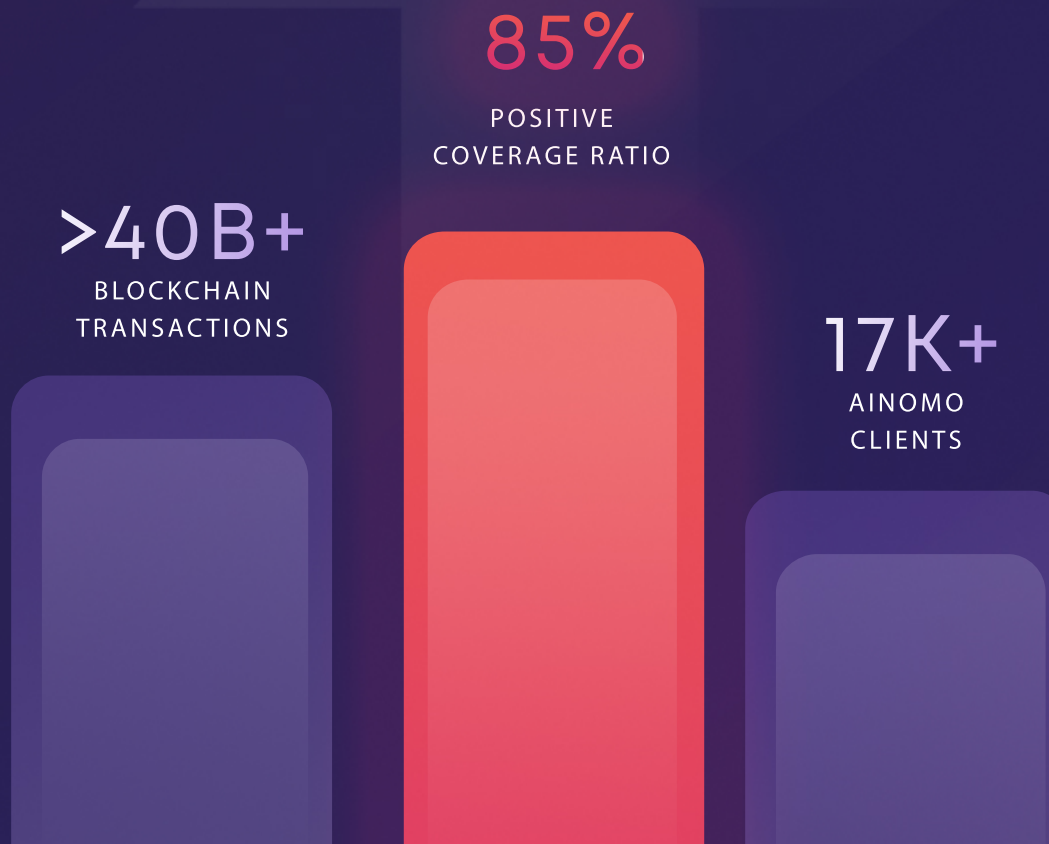

Machine learning algorithms analyze large sets of transaction data on the blockchain, studying their characteristics, such as transaction volume, time, sender and recipient addresses, and history of previous transactions.

Using unsupervised learning techniques such as classification, models are able to identify anomalies and patterns that indicate suspicious activity.

## RECOMMENDATION ALGORITHMS

Algorithms process information about users, including transaction history, financial goals, income level, investment preferences and other relevant data.

Based on this analysis, the system can generate personalized recommendations for investment strategies, portfolio management and financial planning.

# UNPRECEDENTED

Ainomo pride is in numbers

Our Web 4.0 Security developments are setting new standards in the blockchain industry, protecting data and transactions at a level previously technically impossible.

# AINOMO

## MAIN DIRECTIONS

### **Intelligent systems for the financial sector**

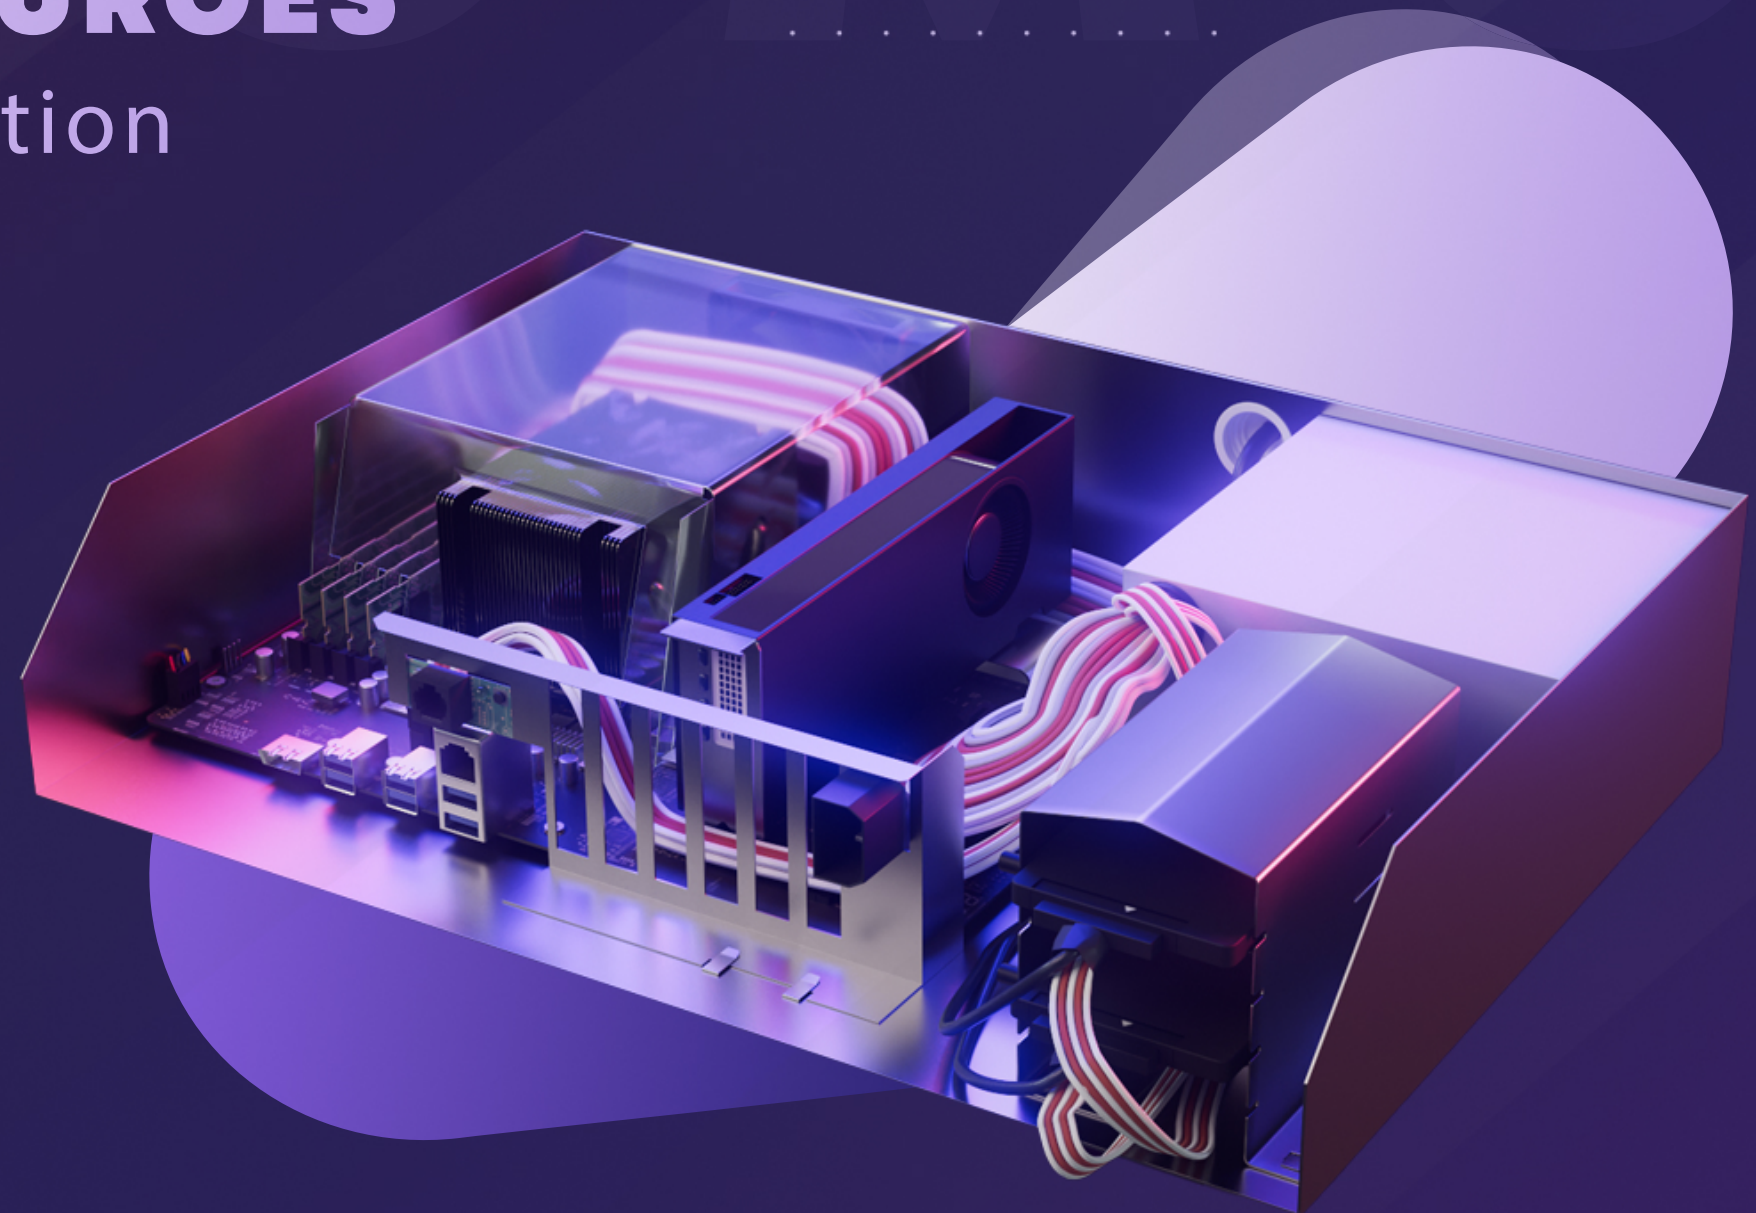

Our AI-powered systems enable operational efficiencies, cost savings and improved decision making through deep data analytics.

# COMPUTING RESOURCES

Data analysis for optimization  
business processes

Ainomo offers big data analytics services to identify trends, optimize business processes and improve decision making.

We use powerful machine learning and artificial intelligence algorithms to process and analyze data, allowing our clients to find new opportunities for growth and efficiency.

# NOMOBANK

## Intelligent systems for the financial sector

We offer advanced solutions for the financial industry, including the development of intelligent systems that can independently analyze market data, make asset purchase and sale decisions and execute trading operations in real time, as well as the development of systems for automating financial planning and analysis, providing deep understanding of financial the state of the company and optimization of budgeting.

Quema's core expertise in AI

# QUEMA

The company offers a wide range of AI-related services, including machine learning, natural language processing, computer vision and robotic process automation. Quema's AI expertise enables companies to transform their operations, improve efficiency and create new value propositions for their customers.

# INTERNATIONAL AUDITS

Ainomo has successfully passed security audits and confirmed the high level of protection of customer data and transactions, which is a fundamental aspect of the company's trust and reliability.

Audits  
**Smart contract**

# AI-PRODUCTS

## Comprehensive solutions

### Automated financial management

Ainomo delivers a range of significant benefits to businesses and individual users based on its innovative approach to the development and implementation of artificial intelligence and blockchain technologies, which includes forecasting market trends, optimizing investment strategies and increasing operational efficiency.

# AI-ARBITRAGE

AI arbitrage systems can automatically manage multiple trades on different exchanges simultaneously, providing highly scalable operations without direct human intervention.

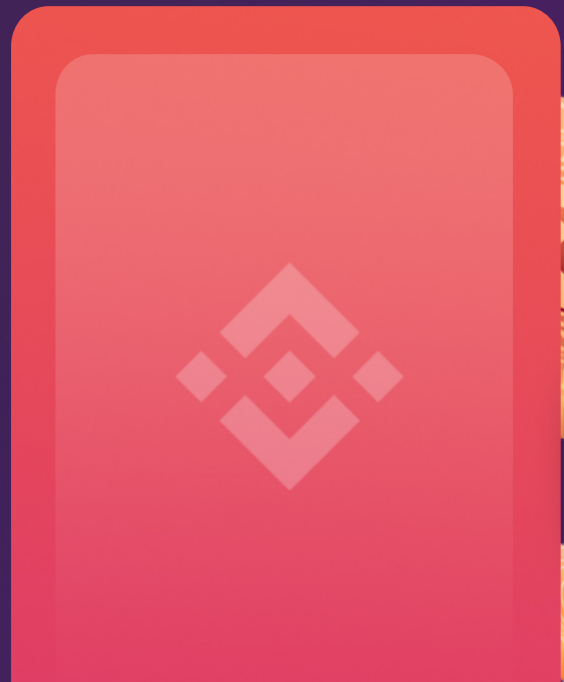

Using machine learning, AI systems can refine their trading strategies based on historical data and the results of previous trades, continuously improving their performance.

**60203.50**

1 BTC = 60203.50 USDT

**60110.70**

1 BTC = 60110.70 USDT

# AI-TRADING

AI systems can effectively manage risk by automatically adapting trading strategies according to changing market conditions and the investor's risk profile.

AI-Trading, or trading in financial markets using artificial intelligence, is the use of machine learning algorithms and artificial intelligence to analyze market data and automatically execute trades.

This approach can identify hidden patterns in data that may not be obvious to humans and make quick decisions to buy or sell assets to maximize profits.

AI Trading opens up new opportunities for financial markets, making trading more efficient, accessible and tailored to each investor's individual needs.

# AI-POOL

AI investment pooling is an innovative concept in investment management where artificial intelligence (AI) is used to manage the pooled funds of a group of investors to maximize returns at a controlled level of risk.

This approach combines the benefits of collective investments with the advanced analytical capabilities of AI to optimize investment strategies.

AI is able to assess the risk of each investment, taking into account the individual risk profile and investment objectives of pool participants, ensuring a balance between risk and potential return.

All operations, from buying and selling assets to rebalancing the portfolio, are performed automatically without the need for constant human intervention, which increases the efficiency of investment management.

**730000 SOL**  
SOL POOL

**15000 BTC**  
BTC POOL

**1.2 BILLION USDT**  
USDT POOL

**59203 ETH**  
ETH POOL

# AI-DERIVATIVES

The use of artificial intelligence (AI) in the derivatives (financial derivatives) industry represents an advanced approach to analyzing, valuing and trading derivatives such as futures, options, swaps and other derivatives.

The AI system automatically selects hedging conditions for each account, taking into account open transactions, current market quotes and profitability ratio analysis on a daily basis.

Complex derivatives, structured products and highly interconnected portfolios can be efficiently analyzed using AI, providing fast and accurate calculations.

**120 HOURS

# AINOMO LOAN

## Blockchain lending system

The lending system is built on the Ainomo Blockchain system and uses smart contracts to manage loans.

### Low commissions

Applying for a loan, writing off payments, prolongation and repayment occur automatically.

### Adaptive conditions

The smart contract makes the use of loans as convenient as possible for users.
